Team Member / Author	Naga Lakshmi
Project Name	Smart Lender: AI-Based Loan Eligibility Prediction System
Maximum Marks	4 Marks

Persona: Loan Officer / Credit Risk Analyst

Context: The Loan Officer is responsible for evaluating mortgage and personal loan applications efficiently. They face high volumes of daily applications and need an automated, reliable pipeline that processes metrics and returns instant eligibility statuses and confidence scores.

SAYS • Speed is crucial: “We need an automated tool to instantly pre-screen applications without digging through raw paper files.” • Accuracy & Explainability: “The model’s decisions must be transparent so we can justify loan rejections to applicants.” • Operational Need: “I want to run standard web queries and upload batch CSV files for wholesale application reviews.”	THINKS • Risk Assessment: “Will this machine learning model fail to detect high-risk applicants, resulting in higher defaults (NPAs)?” • Workflow Optimization: “How much manual processing time will this actually save my underwriting department?” • Trust and Usability: “Can I rely on the confidence scores generated by these algorithms (Random Forest, XGBoost)?”
DOES • Inputs Information: Submits applicant profile criteria into the Flask-based web user interface. • Runs Batch Tasks: Uploads legacy dataset batch CSVs to process bulk pre-screenings and downloads reports. • Analyzes Trends: Monitors analytical dashboard trends, loan approvals, and tracks prediction history.	FEELS • Responsible: Accountable for credit underwriting quality and keeping bank defaults to a minimum. • Anxious: Stressed by backlogs of daily pending loans and the potential of approving fraudulent profiles. • Relieved & Confident: Empowered when backed by structured, accurate data-driven ML predictions.
